Proof that nonzero rationals are
countable I want to prove that the set
of nonzero rational numbers is
countable. The hint is to use the fact
that every nonzero rational number
has a q in the denominator. I
understand the hint and what I need to
do. I'm having a bit of trouble,
though. I'm not really sure how to
start this

A new US government report has identified the
six Chinese smartphone
manufacturers that have captured the
bulk of the US market, saying that
they are having an increasingly
disruptive impact on US technology

exports. The report, ‘The Security Implications of Chinese Investment in U.S. Technology: The Rise of the Sourcing Companies’, says the six companies, Huawei, ZTE, TCL, Lenovo, Xiaomi and Oppo, have captured nearly half of the US market and now serve as major suppliers of telecommunications equipment, networking equipment and electronic components. US firms have lost more than \$1.3bn since 2012 in contracts with the six companies, and they have been identified as a major source of supply chain problems for US manufacturers of consumer

electronics, according to the report.

“These Chinese companies have captured nearly half of the US smartphone market, and have become important suppliers of telecommunications equipment, networking equipment, and electronic components to US manufacturers of consumer electronics,” the report, published on Friday, said. “To an increasing extent, Chinese companies now serve as suppliers of foreign technology to US companies, as they have become the suppliers of choice for many US technology firms.” The report found that Huawei has

increased its share of the US market to 36.8%, while Lenovo has risen to 18.8% and ZTE has risen to 15.1% in the same period. “Unlike in previous years, smartphone sales are increasingly dominated by foreign manufacturers, rather than US companies. Since the smartphone market is now predominantly global and manufacturers are integrating supply chains across the world, Chinese companies have become the suppliers of choice for US manufacturers,” said Dennis Coates, chairman of the Technology Policy Program at the Centre for Strategic

and International Studies. According to the report, the scale of Chinese investment in the United States could put national security and the economy at risk, particularly if the firms are seeking to acquire sensitive technology that could be used to gain competitive advantage in the US market.
