I was under the impression that Britannica had more in depth information on subjects so if Wikipedia didn't have the answer, I figured the Encyclopedia had an answer. I was just curious as to what HN might think about Wikipedia/Britannica as a study aid. ===== bartonfink As a college student, I find Wikipedia to be the most effective study aid. It's free and has such a comprehensible organization that I'm not so incapable of synthesizing the information. You can access a great deal of material by going through the links, reading the article summaries, and clicking on the links to other articles. That way you can see the concepts behind the article and what the author is trying to explain while avoiding having to learn the language used by the author. The articles are concise and to the point. Their organization is such that going from one page to another is a natural progression. I find it to be my main tool for developing mental models and preparing exams. I can browse Wikipedia for hours at a time and I've never needed to call up a counselor. Wikipedia is a great study tool. --- lousimg H d4474df7b8
