It is unclear whether early relapse in the disease (ERD) and persistent elevation of serum disease-free survival (D-SDF) have the same prognostic meaning for patients with ovarian cancer. To determine whether D-SDF can be used to predict ERD after adjuvant platinum-based chemotherapy. Prospective longitudinal observational study. Gynecological Oncology Unit, University Hospital of Ferrara, Italy. Sixty-six consecutive patients with stage II-III epithelial ovarian cancer who had surgery followed by adjuvant platinum-based chemotherapy and recorded D-SDF at a median of 2 months after the beginning of chemotherapy. SDF-1 plasma levels were measured by enzyme-linked immunosorbent assay. ERD was defined as a progressive disease at relapse within 12 months after surgery. Time to relapse (TTR) was defined as the time from surgery to the first evidence of relapse or disease progression. The median D-SDF was 4.3 ng/mL (range 0.8-62.5) and the median TTR was 39 months (range 0-74). ERD was observed in 43% of patients. The median D-SDF in the patients who relapsed early was 10.2 ng/mL (range 4.4-62.5) and in the patients who relapsed later 8.3 ng/mL (range 3.3-39.4) ( $P = 0.39$ ). The median D-SDF in the patients who survived longer than 36 months was 4.1 ng/mL (range 0.8-26).

Action-comedy about a simple chef from Chandni Chowk, mistaken by the inhabitants of the oppressed for the reincarnation of the ancient peasant warrior Liu Shenha. cinema. While Skeleton Pattern, the Chinese community expects him to take on the brutal mafia kingpin Hojo (Gordon Liu). Meanwhile Sahi (Deepika Padukone) is looking for her. To watch this picture, I advise you to watch it in the original with subtitles (if you speak Korean), otherwise, you will watch both the film as a whole and its main idea, how simple and easy it is to deceive a person- in particular, in which there are a lot of funny moments. Like many films, 'Tangled' starts from the very beginning. So don't expect things to end up the way you expected. fffad4f19a
