Mainframe refresher download pdf mainframe Plot synopsis His first job was with IBM's Java System Facility on the mainframe, which helped him to understand and use the internal data structures. He subsequently moved to the ISRASCO Group, where he designed the first mainframe compiler and the first mainframe language, known as the "LANG/6" language. After that he moved to CSIRO to work on the COBOL compiler. He was a member of the COBOL task team, which developed COBOL 2 and COBOL 3. He has held several advisory and advisory committee positions at the JIC, and co-ordinated the early work on the COBOL3 phase. Over the years he has held a number of high level IT and management roles at IBM and CSIRO. At the time of retirement, he was Professor of Computer Science at the Australian National University. A: You need to convert the function into a state machine: let func (x:float) = x + 1 type Func = Func let f = Func let result1 = f (1.0)
