The virtual Buss Compressors plug-in is a three-way equalized compressor with variable cutoff frequency, ratio and gain control. The compressor has been designed for mastering and recording purposes. It is equipped with a fixed hard-clipper as well as both a tape-delay algorithm and a low-pass filtering algorithm for subtle improvements of the overall sound. The compressor is a typical tube equalizer with three high-quality cascaded EQ stages, which offer independent control over the cutoff frequency, gain, level and resonance of each band. It is equipped with a fixed hard-clipper as well as both a tape-delay algorithm and a low-pass filtering

algorithm for subtle improvements of the overall sound. The compressor is a typical tube equalizer with three high-quality cascaded EQ stages, which offer independent control over the cutoff frequency, gain, level and resonance of each band. The compressor is based on the current standard for the mastering and recording industry, with three EQ cascades: - Bass EQ - Midrange EQ - Treble EQ Because this compressor works like a buss compressor, it offers a special compression action for the complete audio spectrum. The compressor parameters are controlled via sliders in the User Interface, which help you create a natural sound. The virtual Buss Compressors plug-in offers a fixed hard-clipper to automatically clip audio and an additional button for the hard-clipping function. An additional frequency-dependent notch filter is integrated to the compressor, which is especially effective in reducing clipping of the upper frequencies and to keep the attack and release times of the compressor soft. Another useful feature for the mastering process is the tape-delay algorithm. This feature allows you to create a synthetic echo effect for your audio and set the delay time and effect length. The virtual Buss Compressors plug-in also offers a separate low-pass and high-pass filter for the left and right

channel to simulate the studio ambience. You can adjust the filter roll-off, resonance, resonance-Q factor and the amount of bass and treble the filter is cutting out. The virtual Buss Compressors plug
