communication devices, and more particularly to a signal strength detector for monitoring the strength of a received RF signal. Portable radio communication devices of a type that are powered by a rechargeable battery pack are becoming increasingly popular. One such device is a portable cellular radio telephone. These types of devices are often operated in the context of a two-way voice communication with a counterpart fixed or mobile station. The functions performed by the portable radio communication device as well as the range of the device are controlled by a controller with a memory. The controller also controls the activation of the RF communication transmitter and receiver, as well as the output of audible and visible indicators, when the device is in a

communication mode. RF signals received from the counterpart fixed or mobile station have to meet certain predetermined signal strength and timing requirements in order to ensure an effective two-way RF communication link. These signal strength and timing requirements are

==== If you are a developer for the Adobe Photoshop platform and you want to build into Photoshop your own extensions, you need the SDK. The Adobe Photoshop SDK is the development kit containing all the tools and information you need to develop. The Photoshop SDK is divided into three parts. 1. The SDK contains the programming interface for all Photoshop modules and filters, which means that the plug-ins you develop are integrated in the Photoshop program. 2. The Plug-in SDK is a separate development kit that contains the information necessary for developing a completely new plugin. 3. The ActiveX SDK is a standard component (Win32) that allows

you to build ActiveX components for Windows. Installation Requirements:

===== i. A Windows computer ii. The latest version of the Adobe Photoshop Express SDK, version 10.1 Overview: ===== If you want to develop components for the Adobe Photoshop platform, you will find the Adobe Photoshop Express SDK very helpful. The SDK can be installed as a standalone component or added to your existing Visual Studio installation. Both installation paths give you access to the same content. The only difference is the component type. Using the standalone SDK you have to include the DLL files that you need yourself and find them in the SDKs directory. The ActiveX version of the components on the other hand is a fully integrated component and is

included in the SDK, so you don't need to deploy any DLL files yourself. The first thing you will notice when you start Photoshop Express Studio, is that the Explorer view, where you navigate the components in the SDK, has been replaced with a Python script editor. You will find the script editor view right in the upper half of the dialog box. The SDK contains two main parts: 1. The SDK itself, where you can download and use the various components that are provided by Adobe Photoshop. 2. The Plug-in SDK which contains detailed information on how to develop plugins yourself. What you need to install:

===== A stand-alone version of Photoshop Express Studio (the component that you use to install and use the Photoshop SDK) A version of the

SDK that is compatible with your version of Photoshop Express Studio What you need to download:

===== i. A version of the SDK that is compatible with your version of Photoshop Express Studio ii. All the DLL files that you need What you need to use: ===== i

Q: Proof of a function having a particular property I was reading a graph theory textbook and found a proof that I do not fully understand: For every function $f: X \rightarrow Y$ there is a function $g: Y \rightarrow X$ such that $f \circ g = \text{id}_Y$ and $g \circ f = \text{id}_X$. For the $f \circ g = \text{id}_Y$, for all $x \in X$ we get $f(g(f(x))) = f(x)$ and, since f is a function, $f(g(f(x))) = f(x)$ and therefore $g(f(x)) = x$ and therefore $g(f(g(x))) = g(x)$ so g is surjective. For the $g \circ f = \text{id}_X$, for all $y \in Y$ we get $g(f(y)) = y$ but we also
