Wind SFTP Server Crack + For Windows [Updated-2022]

Wind SFTP Server is a free SFTP server that lets you setup a secure, scalable SFTP-only or FTP/FTPS-based FTP server with minimal configuration. You can set the server to listen on a single port (such as 22), a range of ports (such as 22-25), or all ports (defaults to all ports). Wind SFTP Server comes with multiple authentication methods, such as user/password based authentication and GSSAPI/Kerberos based authentication. It is supported by Windows 8 and above. You can also use the built-in PowerUser and PowerUser LocalServer role-based access control feature to allow or deny access to remote users based on user groups or user permissions. The user interface of Wind SFTP Server is very simple and easy to understand, yet it gives you access to all the features. You can enable/disable users/groups, set their credentials, and change their permissions. Multiple transfer modes are supported, including sftp, ftps and sftp+ftps. You can also choose between password mode, TLS mode, or both. Wind SFTP Server will automatically create directories for users and will create and save log files for both successful and unsuccessful logins. It can log these files to an FTP, a FTPS, or a local directory. The application comes with an advanced security feature that allows you to restrict access to remote users based on their IP address or the hosts they are coming from.

System Requirements: Wind SFTP Server is a standalone application that does not require any other server to work. Major features: SFTP only SSL/TLS and FTPS supported GSSAPI/Kerberos authentication PowerUser Role-based access control Password mode, TLS mode or both FTP & FTPS mode FTP/FTPS log files Unique self-installing software Configure without any networking knowledge File transfer security Automatically creates directories for users and saves log files Create a list of allowed IPs View a list of blocked IPs The Easy way to configure SFTP Server Multi-User Mode Authentication method Enable/Disable users Set user credentials Set permissions View logs Configure Remote IP Whitelists & Blacklists There are 3 main modes for SFTP: Single-user mode - Allows only one user to access the server - No permissions control - Preferably used in private servers

What's New In?

Wind SFTP Server is a simple and efficient SFTP server that allows you to host your own secure FTP/FTPS servers and has support for read and write access. It's easy to use and intuitive, so you won't have to go through any complicated setup processes. With Wind SFTP Server, you can easily: * Create and manage a list of users and provide them with access to the server * Set log levels and directories * Whitelist or blacklist IP addresses * Upload and download files * Set file permissions

About Us: Wind SFTP Server was designed to provide users with an easy-to-configure SFTP server. Despite of what its name implies, support is not restricted to SFTP alone, but includes FTP and FTPS as well. There's no shortage of this type of software on the market, but the fact of the matter is that all of them are relatively difficult to configure and require extensive networking knowledge. Wind SFTP Server adopts a more user-oriented approach and comes across as a reliable alternative to more sophisticated server implementations. You can start configuring the server as soon as the installation process ends. The whole setup is carried out inside a simple, yet intuitive interface that is divided into several tabs, each of them dealing with different parameters. First and foremost, you are required to define the host settings, namely the IP interface (which is automatically detected) and the port number, as well as the type of protocol to be used and log related configurations such as the directory where it should be kept and the log level. In the second tab, you can create a list of users who will have access to the server based on a username and password that you define. You can also set permissions as read-only (access is restricted to reading files) or full access (users can also perform write operations). The last of the tabs deals with IP whitelists and blacklists. Here, you have the possibility of creating a list of allowed or blocked IPs, therefore you are granted full control over who can login to the server. Don't forget to press the 'Save' button once you've made the configurations, otherwise changes will not be remembered. In conclusion, Wind SFTP Server comes across as a simplistic approach to setting up and maintaining a server, with minimum impact on system resources.

Summary: Wind SFTP Server is a simple and efficient SFTP server that allows you to host your own secure FTP/FTPS servers and has support for read and write access. It's easy to use and intuitive, so you won't have to go through any complicated setup processes. With Wind SFTP Server, you can easily: * Create and manage a list

System Requirements For Wind SFTP Server:

1 player Internet Connection Minimum Specs: OS: Windows XP/Vista/7 RAM: 1 GB RAM Processor: 1.8 Ghz Pentium Dual-Core Recommended Specs: OS: Windows 7 Processor: 2.0 Ghz Core 2 Duo Also make sure your system has at least DirectX 9.0, Vsync turned off and 3D AA turned on It is highly
